

Project student: Jennifer Armstrong

Supervisors: Professor Rob Wilby (University of Loughborough), Dr Dapeng Yu (University of Loughborough), Professor Robert Nicholls (University of Southampton)

Project Title: Coastal management and stakeholder engagement around nuclear new build in the UK

Project Outline: This research project will examine different frameworks for stakeholder engagement at the sediment cell level. The utility and construction of computer models will be integrated with coastal simulations in order to evaluate the long-term evolution of the coastline and to explore the consequences of varying coordinated adaption responses.

Student Biography: Jennifer graduated in the summer (2012) with a BSc in Geography from the University of Loughborough. During her undergraduate degree she developed a keen interest in climate change, resource security and the involvement of different stakeholder groups. She will progress these research interests with the ARCoES project.
