Programme Overview

The MSc Nursing programme aims to nurture innovative professional practitioners, prepared to advance their knowledge and develop nursing within their specialist fields. The programme is delivered through a series of modules, which address the four cornerstones of professional nursing at an advanced level. The MSc Nursing provides a solid foundation for the further development of nursing careers, and is suitable for people wishing to become specialist nurses, nurse managers, nurse educators and nurse researchers.

All teaching is evidence based, and is informed by relevant research. Where appropriate, learning is enhanced by a multi-professional approach to teaching, which is informed by the research expertise of staff.

The MSc cohorts are small, and teaching sessions are interactive, thus enhancing each student’s learning experience by way of facilitating discovery of and engagement with a range of perspectives, ideas and backgrounds.
