## RESEARCH USING SAVSNET DATA CHOCOLATE TOXICITY

USING CONSULT DATA TO REVIEW CHOCOLATE EXPOSURE

Paper published in the Vet Record <u>here</u>

### **TOXICITY**

Chocolate has long been recognised as, and remains, a common cause of intoxication in dogs

### **STUDY**

Data collected from 229 UK vet practices taking part in SAVSNET over five years

### **SEASONALITY**

Chocolate exposure was most notably recorded at Christmas (OR=4.74, CI 3.04 to 7.40, P<0.001)

### **AGE OF DOG**

Chocolate exposure was significantly less common in old dogs (OR=0.42, CI 0.31 to 0.56, P<0.001)

# 6 Neffy Chismas

### **TAKE ACTION**

Owners need to be extra vigilant over Christmas and ensure that chocolate is kept away from their dogs

## **AND THANK YOU**

Thank you to all participating veterinary practices for making this work possible. The findings can be highlighted to owners to raise awareness over the festive period
