

ROYAL ASTRONOMICAL SOCIETY SPECIALIST DISCUSSION MEETING

UKSEDI: Study of the Earth's Deep Interior

Organisers:

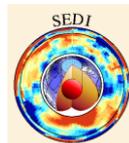

Richard Holme (Liverpool), Kathy Whaler (Edinburgh) & James Wookey (Bristol)

Friday 11th November 2011
Royal Astronomical Society Lecture Theatre
Burlington House, Piccadilly

SEDI is the Study of the Earth's Deep Interior (the mantle and core), with links into comparative planetology. The SEDI community includes people within all areas of deep Earth study, particularly seismology, geochemistry, geodynamics, mineral physics and geomagnetism, and its science is strongly characterised by its interdisciplinary links. Internationally, it includes a focus group organising sessions at the AGU meeting, and a committee of IUGG that organises an international meeting every two years.

We seek contributions from all interested in study of the deep Earth and planets. A particular aim is to search for possible collaborations that will lead to a strong UK participation at the next international SEDI meeting, to take place in Leeds in 2012. It will also be timely to consider the recently announced NERC initiative "Deep Earth control on the habitable planet" in the Earth System Strategic Research Theme.

This Specialist Discussion meeting is open to all; admission is free for RAS members, £15 for non-members (£5 for full-time students). For further details of location and times see www.ras.org.uk/ or phone the Society on 020-7734-3307.
