Cervical Carcinoma (CSCC)

UNIVERSITY OF LIVERPOOL

Cancer Cervical

Question Are the IR biomarkers for oral potentially malignant disorders (OPMDs) also characteristic of histologically similar dysplasia or squamous cell carcinoma in cervical tissue?

Benefits If some IR biomarkers are found to be common to oral and cervical squamous cell carcinoma (CSCC) then a single medical device could be used for the diagnosis and prognosis of many cancers

Funding CRUK grant EDDPJT-May23/100024 (2023–2026)
