The ABC of Galaxy Evolution

Where Does the Story Start?

At the Beginning ... of Everything ...

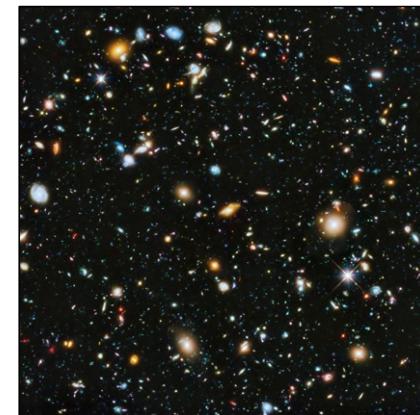

Cosmic Microwave Background (CMB)

5

Cosmic Structure

How did the Universe evolve from the CMB to being a structure full of galaxies?

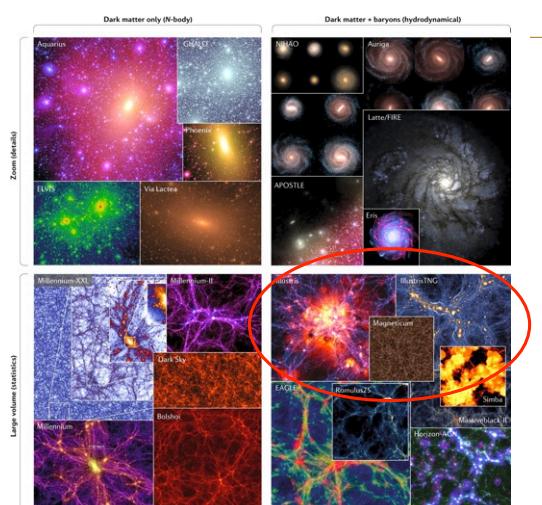

6

Simulations

Everything we understand about the evolution of cosmic-scale structures is the result of computer simulations.

This talk uses images and videos from the 'Illustris' simulations.

7

Cosmic Structure

The 'dimples' in the cosmic golf ball gave rise to the variations in the CMB ...

... and over billions of years collapsed into a cosmic web of filaments and voids.

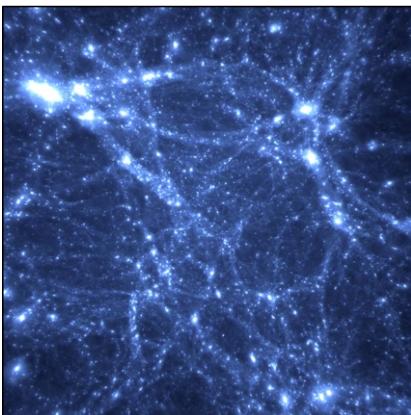

8

The ABC of Galaxy Evolution

Cosmic Web

The 'dimples' in the cosmic golf ball gave rise to the variations in the CMB ...

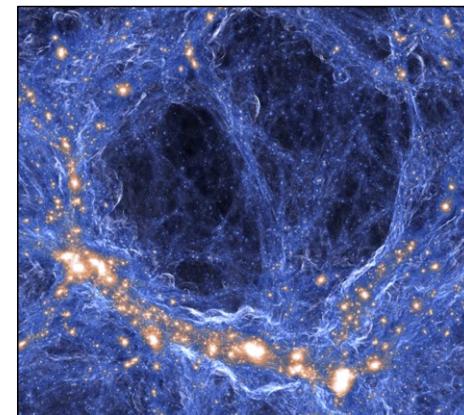

... and over billions of years collapsed into a cosmic web of filaments and voids.

9

Cosmic Web

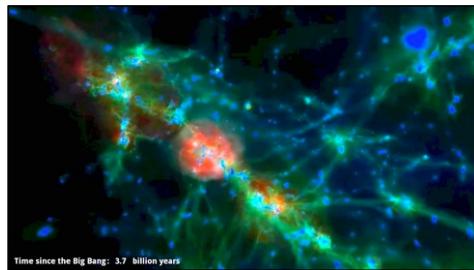

Simulations of the cosmic web show how the densest parts of the filaments are the nucleation sites for clusters of galaxies.

10

Galaxies and Stars

If a simulation of galaxy formation is to give realistic results then it must also take account of **star** formation and evolution.

Time since the Big Bang: 3.7 billion years

Gas blasted out (red bubbles) by black holes or massive stars ending their lives as supernovae can slow matter falling in from the filaments.

The ABC of Galaxy Evolution

Accretion

Galaxies were formed by matter created in the Big Bang accreting under the influence of gravity

Black Holes

Supermassive black holes are at the centres of galaxies; some are very active, sometime are quiescent

Collisions

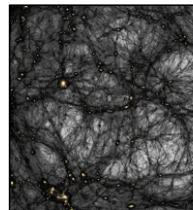

Galaxies grow by colliding and merging with other galaxies over billions of years

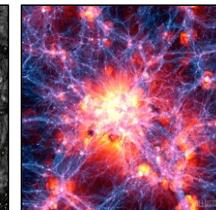

13

Illustris

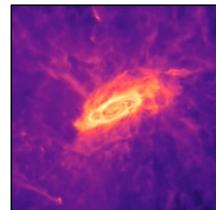

The Illustris project is a set of simulations of galaxy formation and evolution that run from just after the Big Bang to the present day.

Dark matter web

Black holes + supernovae

Matter accretion

The simulations account for the effects of dark matter, star formation, black holes and supernovae in calculating how matter accumulates over billions of years into galaxies.

www.illustris-project.org

14

IllustrisTNG

The Illustris simulations ran for 20 million cpu hours (2013–2015)

These were followed by even more sophisticated simulations ...

Illustris – The Next Generation !

IllustrisTNG simulations ran for 200 million cpu hours (2017–2019)

(If the simulations ran on an average desktop computer, they would have to run for over 20,000 years to give comparable results.)

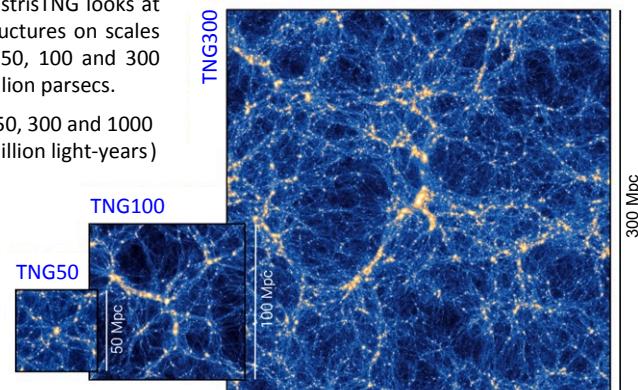

www.tng-project.org

15

IllustrisTNG

IllustrisTNG looks at structures on scales of 50, 100 and 300 million parsecs.

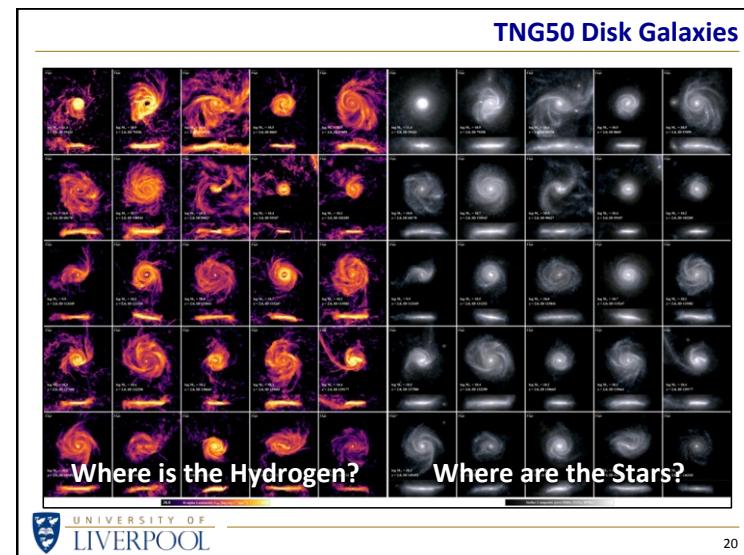

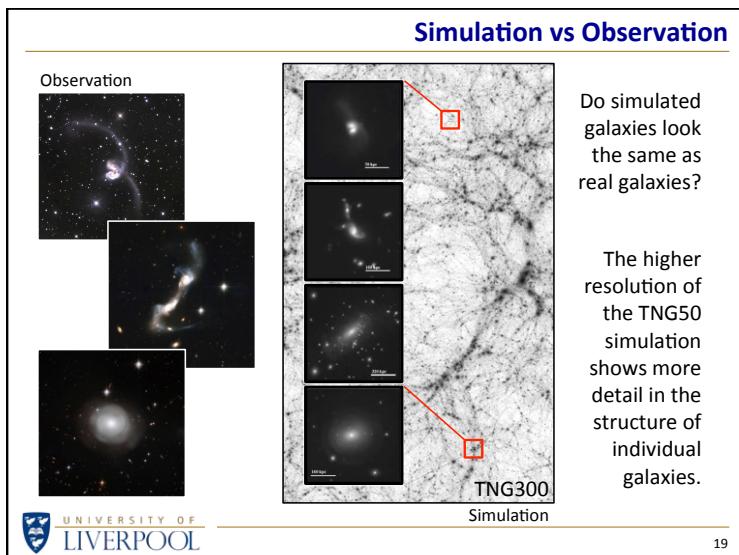

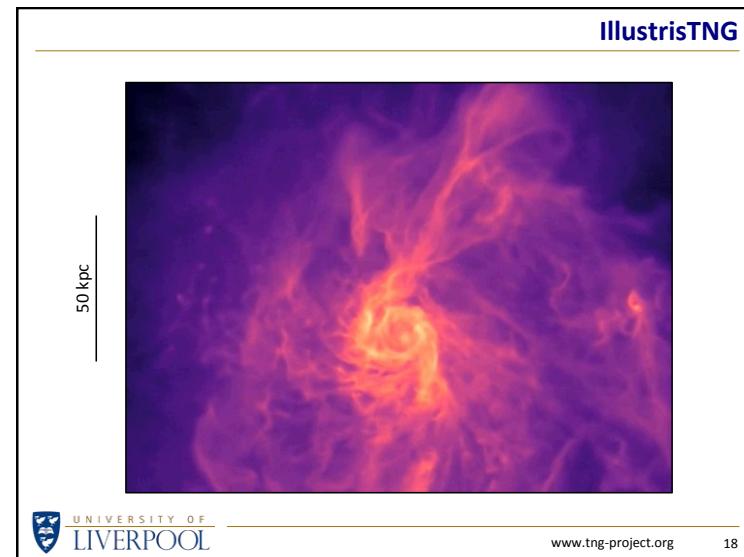

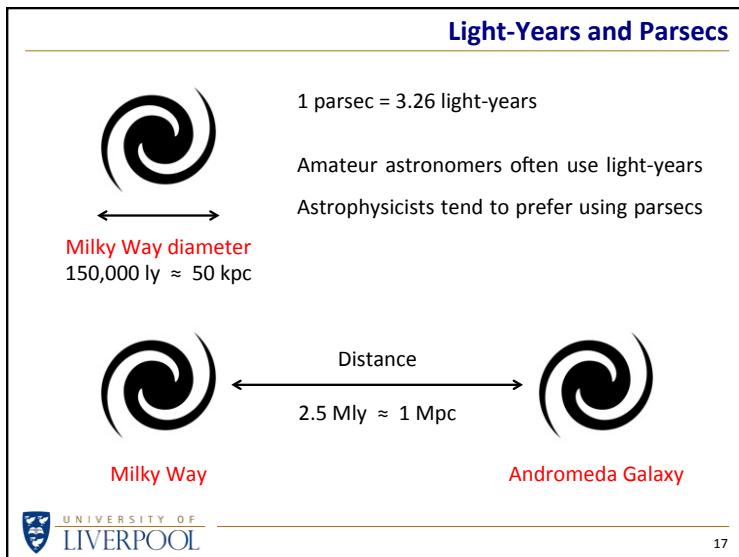

(150, 300 and 1000 million light-years)

The ABC of Galaxy Evolution

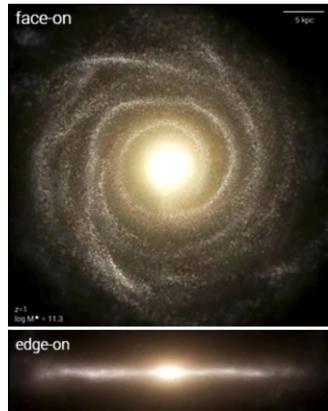

The ABC of Galaxy Evolution

Milky Way Analogue

TNG50 generates galaxies with masses of about 200 billion stars that look a lot like the Milky Way.

The face-on view shows the spiral arms and the edge-on view shows the central 'bulge' and the thin disk.

21

The ABC of Galaxy Evolution

Accretion

Galaxies were formed by matter created in the Big Bang accreting under the influence of gravity

Black Holes

Supermassive black holes are at the centres of galaxies; some are very active, sometime are quiescent

Collisions

Galaxies grow by colliding and merging with other galaxies over billions of years

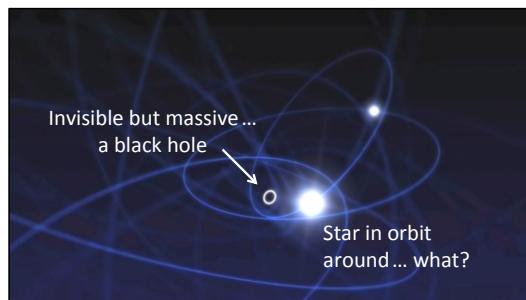

22

At the Heart of a Galaxy

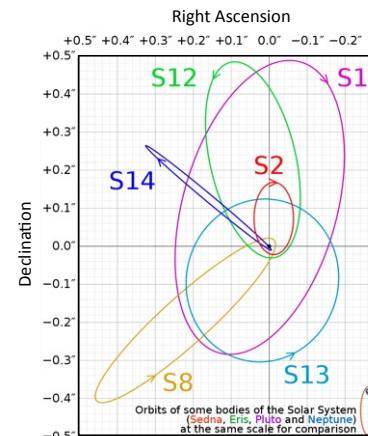

How do we know what lies at the centre of a galaxy?

A close look at stars orbiting near the centre of the Milky Way tells us that there is something invisible but **very** massive lurking there...

23

Supermassive Black Hole

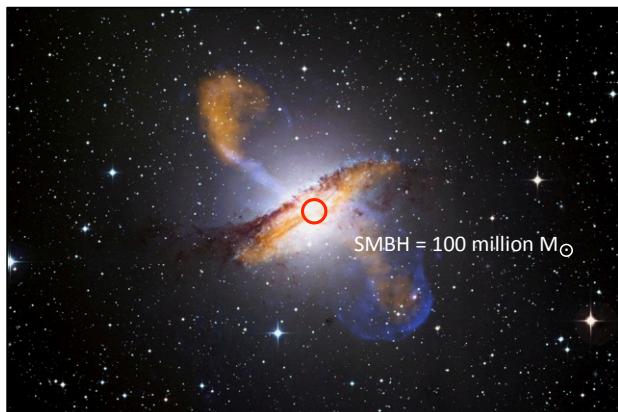

By recording star positions over more than a decade, it was calculated that the object keeping these stars in their orbits has a mass of
4 million M_{\odot}
and a size of no more than a few light-hours (\approx orbit of Pluto).

M_{\odot} = mass of our Sun

33

Galaxy Snapshot

An image of a galaxy can give the false impression that the structure is essentially static, except for a slow rotation that can take hundreds of millions of years.

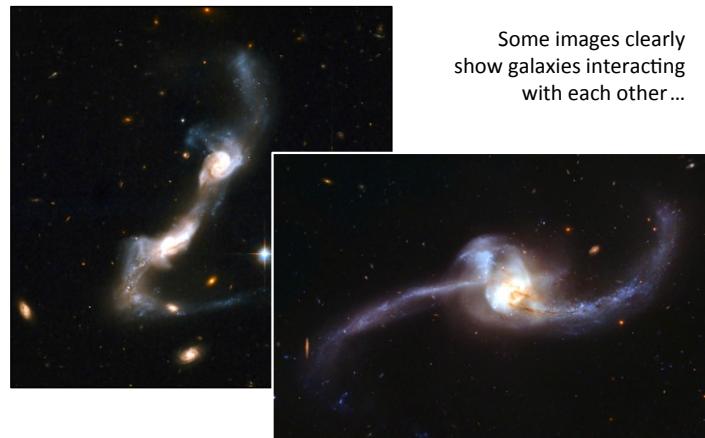

However, over its lifetime, it can evolve due to interactions with other galaxies.

34

Interacting Galaxies

Some images clearly show galaxies interacting with each other ...

35

Interacting Galaxies

Some images clearly show galaxies interacting with each other ...

...but the full influence of collisions and mergers in galaxy evolution can be appreciated only through simulations.

37

Elliptical Galaxies

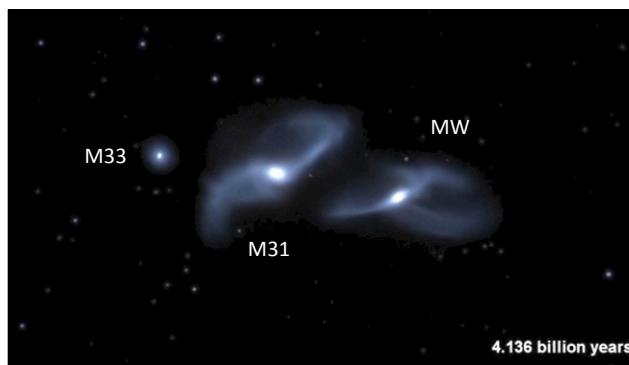

Crowded galaxy clusters often have a larger fraction of (redder) elliptical galaxies compared to (bluer) spirals.

More crowding means collisions are more likely, and colliding spiral galaxies result in elliptical galaxies.
