Dark Matter – Why Is It Dark? Does It Matter?

Why Is It Dark?

Simple answer
It's dark because it's not light

More useful answer
It does not behave the same way as 'ordinary' matter, which

- interacts through the electromagnetic force
- emits and absorbs electromagnetic waves (light)
- can be detected through its interaction with light

Dark matter does none of these

UNIVERSITY OF LIVERPOOL

5

What Is the Evidence? #1

Galaxies in Clusters

What holds galaxies together in clusters?

Gravity (no, it wasn't a trick question)

Gravity depends on mass

Mass can be estimated from luminosity:

- Measure the galaxy brightness
- If we understand stars, then...
 - we know the number of stars (roughly)
 - we know the mass of all the stars (roughly)
 - we know the mass of the galaxy (roughly)

UNIVERSITY OF LIVERPOOL

7

What Is the Evidence? #1

Galaxies in Clusters

Do this for all the galaxies in the cluster

We now have an estimate of the mass

... and hence the gravity

As early as the 1930s it was realised that the gravity calculated in this way is **not enough** to keep the cluster together – the galaxies should have drifted apart long ago.

Something is wrong!

UNIVERSITY OF LIVERPOOL

8

Dark Matter – Why Is It Dark? Does It Matter?

What Is the Evidence? #1

Galaxies in Clusters

Using the luminosity to find the mass seems to underestimate the mass by a huge factor.

It's as if there is some additional mass, that is not luminous, that is providing the extra gravity that is needed to keep the cluster intact, binding the galaxies together.

Let's call this ... "Dark Matter" ... that sounds pretty cool.

9

What Is the Evidence? #2

Stars in Galaxies

All galaxies rotate

How fast are the stars moving?

Use the Doppler effect

10

Dark Matter – Why Is It Dark? Does It Matter?

What Is the Evidence? #2

13

Stars in Galaxies

What do we expect to see for the orbital velocity?

How should it vary for stars further from the centre?

If all the mass keeping
an object in orbit is
inside the orbit...

14

What Is the Evidence? #2

15

Stars in Galaxies

It's as if there is some additional mass, that is not luminous,
that is providing the extra gravity that is needed to keep the
stars (or gas) orbiting at high velocities, even a long way
outside the visible "edge" of the galaxy.

"Dark Matter" again?

What Is the Evidence? #2

16

Dark Matter – Why Is It Dark? Does It Matter?

What Is the Evidence? #2

Without dark matter

With dark matter

17

What Is the Evidence? #3

Gravitational Lensing

This body of evidence is quite unlike the previous two

We can calculate mass from its gravitational effect,

... not on galaxies in a cluster, or stars in a galaxy

... but on light itself

But dark matter does not interact with light, right?

It does not emit or absorb light, that is true

However, dark matter has mass \Rightarrow gravity \Rightarrow bend light

18

Gravitational Lensing

20

Dark Matter – Why Is It Dark? Does It Matter?

Gravitational Lensing

UNIVERSITY OF LIVERPOOL

21

What Is the Evidence? #3

Gravitational Lensing

The (distorted) images \Rightarrow the mass distribution in the 'lens'

We find this is more than we can see in the lens

It's as if there is some additional mass, that is not luminous, that is providing the extra gravity that is needed to bend the light and produce the distorted images.

"Dark Matter" again?

UNIVERSITY OF LIVERPOOL

23

Dark Matter – Why Is It Dark? Does It Matter?

What Is the Evidence? #4

25

What Is the Evidence? #4

Cosmic Microwave Background

The fourth and final strand of evidence is not easy to explain

The CMB:

The degree of granularity – the "clumpiness" – depends on the relative amounts of ordinary matter and dark matter

26

Quantifying the Clumpiness

27

What Is It?

OK, I'm convinced.

There's a lot of evidence that there is something dark out there. But... what *is* it?

There are two main candidates for the composition of DM...

MACHOs

Massive Astrophysical Compact Halo Objects

WIMPs

Weakly Interacting Massive Particles

28

Dark Matter – Why Is It Dark? Does It Matter?

Galaxy Halo

29

MACHOs

MACHOs

Massive Astrophysical Compact Halo Objects

Bodies composed of 'normal' matter that emits no light
Black holes, neutron stars, white dwarf stars

How can they be detected? Gravitational microlensing

30

Gravitational Microlensing by Black Hole

MACHOs

Massive Astrophysical Compact Halo Objects

Bodies composed of 'normal' matter that emits no light
Black holes, neutron stars, white dwarf stars

How can they be detected? Gravitational microlensing

At most, MACHOs account for a few % of Dark Matter

MACHOs

32

Dark Matter – Why Is It Dark? Does It Matter?

WIMPs

WIMPs

Weakly Interacting Massive Particles

Interact through gravity, but not electromagnetism
Similar to neutrinos, but much much heavier and slower

Born in the Big Bang (see "The Beginning of Everything")
Annihilation of DM and anti-DM particles now very rare

WIMPs could be captured by the Sun
... and annihilate with each other to make neutrinos

33

Super-Kamiokande

34

Cerenkov Radiation

35

Dark Matter – Why Is It Dark? Does It Matter?

Dark Matter – Why Is It Dark? Does It Matter?

Gamma Rays

WIMPs

As well as being concentrated (locally) in the Sun ...
there might be a lot of them at the centre of the Milky Way

DM annihilation would produce very energetic gamma rays

There are experiments planned to search for these

42

Cerenkov Telescope Array

Dark Matter – Why Is It Dark? Does It Matter?

WIMP Detection

CDMS – Cryogenic Dark Matter Search

GeSi crystals with a superconducting skin

Detect vibrations produced by atom being "kicked" by WIMP

DRIFT – Directional Recoil Identification From Tracks

1000 litres of low pressure gas

An atom hit by a WIMP can recoil by mm, making a track

PICASSO – Project in Canada to Search for Supersymmetric Objects

Freon bubble chamber with 200µm bubbles in gel matrix

WIMPs turn liquid bubble gas \Rightarrow acoustic shock wave

46

WIMP Detection

There are many other attempts to detect DM directly...

CRESST in Gran Sasso, Italy

DAMA in Italy

DEAP at SNOLAB, Canada

EDELWEISS in France/Italy

SIMPLE in France

WARP at LNGS, Italy

Many of these experiments have observed "events" ...

... but many are contradictory or not yet confirmed

47

Alternatives

There is another possibility ...

- We have misunderstood how gravity works
- Hence we only seem to need dark matter

Maybe gravity works differently on the scale of

- The Universe
- The Galaxy
- The Solar System and smaller

There is a theory called Modified Newtonian Dynamics (MOND)

However, it generates more problems of its own

48

Dark Matter – Why Is It Dark? Does It Matter?

Does It Matter?

What are the consequences?

Simulations \Rightarrow galaxy distributions similar to observations
Without dark matter, matter doesn't "clump" enough
