# Dark Matter

## Why Is It Dark? Does It Matter?

Dr Steve Barrett

19 May 2014

**Dark Matter**

---

Why is it dark?	matter and light
What is the evidence?	galaxies in clusters stars in galaxies gravitational lensing cosmic background
What is it?	MACHOs WIMPs
Does it matter?	cosmic evolution

---

Dark Matter / Introduction

3

**Why Is It Dark?**

---

**Simple answer**  
It's dark because it's not light

**More useful answer**  
It does not behave the same way as 'ordinary' matter, which

- interacts through the electromagnetic force
- emits and absorbs electromagnetic waves (light)
- can be detected through its interaction with light

Dark matter does none of these

---

Dark Matter / Why Is It Dark?

# Dark Matter – Why Is It Dark? Does It Matter?

## What Is the Evidence? #1

### Galaxies in Clusters

What holds galaxies together in clusters?

Gravity (no, it wasn't a trick question)

Gravity depends on mass

Mass can be estimated from luminosity:

- Measure the galaxy brightness
- If we understand stars, then...
  - we know the number of stars (roughly)
  - we know the mass of all the stars (roughly)
  - we know the mass of the galaxy (roughly)

## What Is the Evidence? #1

### Galaxies in Clusters

Do this for all the galaxies in the cluster

We now have an estimate of the mass

... and hence the gravity

As early as the 1930s it was realised that the gravity calculated in this way is **not enough** to keep the cluster together – the galaxies should have drifted apart long ago.

Something is wrong!

## What Is the Evidence? #1

### Galaxies in Clusters

Using the luminosity to find the mass seems to underestimate the mass by a huge factor.

It's as if there is some additional mass, that is not luminous, that is providing the extra gravity that is needed to keep the cluster intact, binding the galaxies together.

Let's call this ... "Dark Matter" ... that sounds pretty cool.

# Dark Matter – Why Is It Dark? Does It Matter?

**What Is the Evidence? #2**

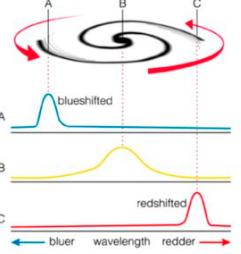

---

**Stars in Galaxies**

All galaxies rotate

How fast are the stars moving?

Use the Doppler effect

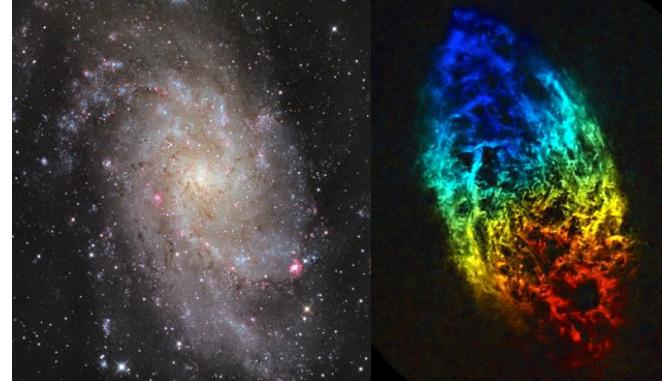

Dark Matter / Evidence / Stars In Galaxies

9

**What Is the Evidence? #2**

---

Dark Matter / Evidence / Stars In Galaxies

12

# Dark Matter – Why Is It Dark? Does It Matter?

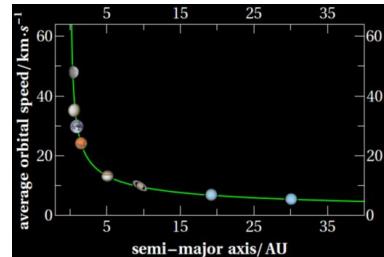

## What Is the Evidence? #2

### Stars in Galaxies

What do we expect to see for the orbital velocity?

How should it vary for stars further from the centre?

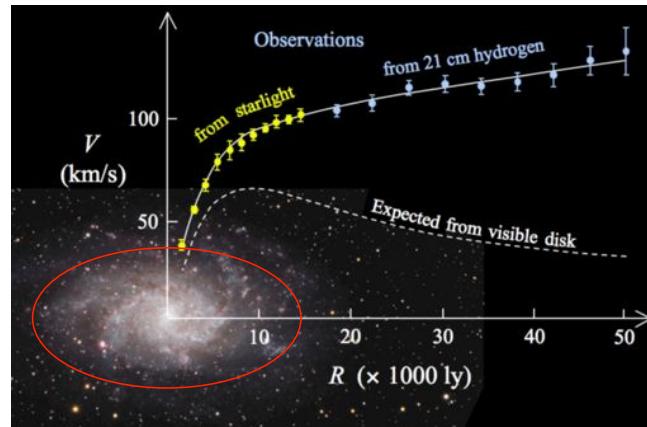

If all the mass keeping  
an object in orbit is  
*inside* the orbit...

Dark Matter / Evidence / Stars In Galaxies / Rotation Curves

13

## What Is the Evidence? #2

Dark Matter / Evidence / Stars In Galaxies / Rotation Curves

14

## What Is the Evidence? #2

### Stars in Galaxies

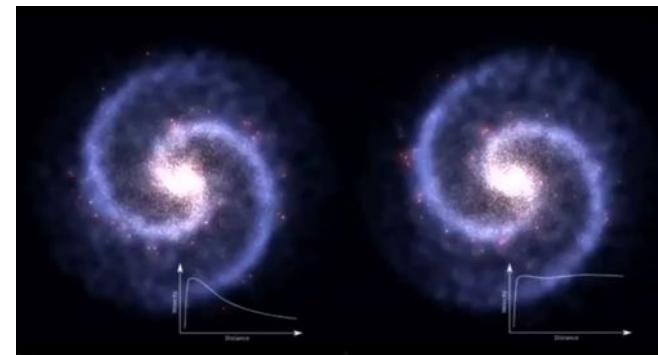

It's as if there is some additional mass, that is not luminous, that is providing the extra gravity that is needed to keep the stars (or gas) orbiting at high velocities, even a long way outside the visible "edge" of the galaxy.

"Dark Matter" again?

Dark Matter / Evidence / Stars In Galaxies / Rotation Curves

15

## What Is the Evidence? #2

Without dark matter

With dark matter

Dark Matter / Evidence / Stars In Galaxies / Rotation Curves

16

# Dark Matter – Why Is It Dark? Does It Matter?

**What Is the Evidence? #3**

---

**Gravitational Lensing**

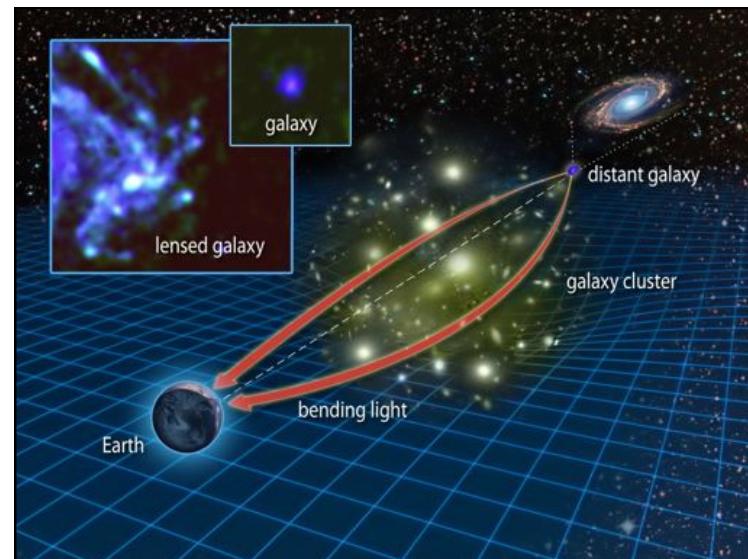

This body of evidence is quite unlike the previous two  
We can calculate mass from its gravitational effect,  
... not on galaxies in a cluster, or stars in a galaxy  
... but on light itself

But dark matter does not interact with light, right?  
It does not emit or absorb light, that is true  
However, dark matter has mass  $\Rightarrow$  gravity  $\Rightarrow$  bend light

---

Dark Matter / Evidence / Gravitational Lensing

17

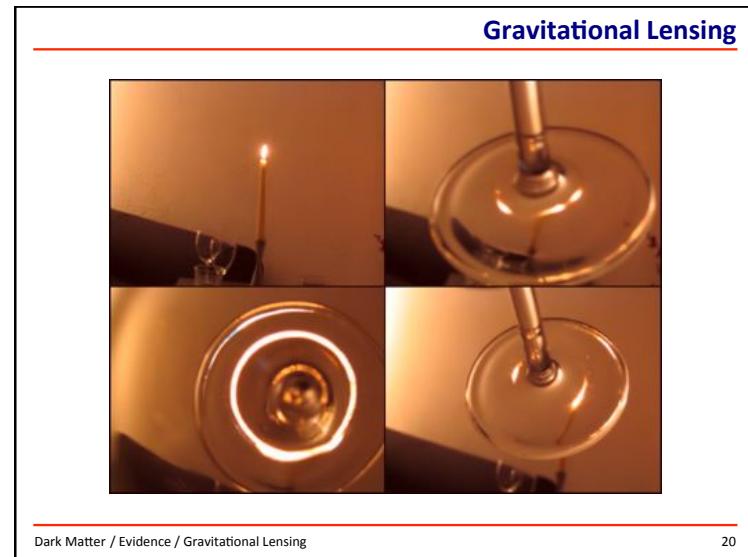

**Gravitational Lensing**

---

A photograph of a galaxy cluster against a dark background. A bright, yellowish-orange galaxy in the center-left is surrounded by a distinct, multi-colored ring of light, characteristic of a gravitational lens effect. Other smaller galaxies are visible in the background.

Dark Matter / Evidence / Gravitational Lensing

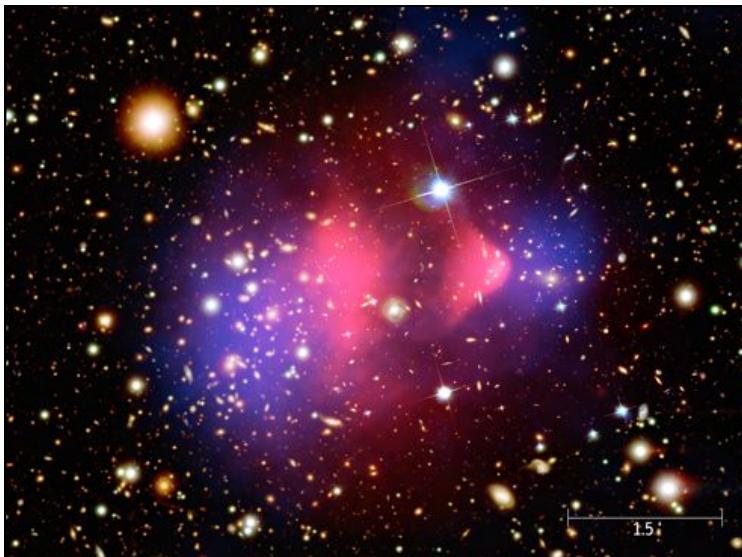

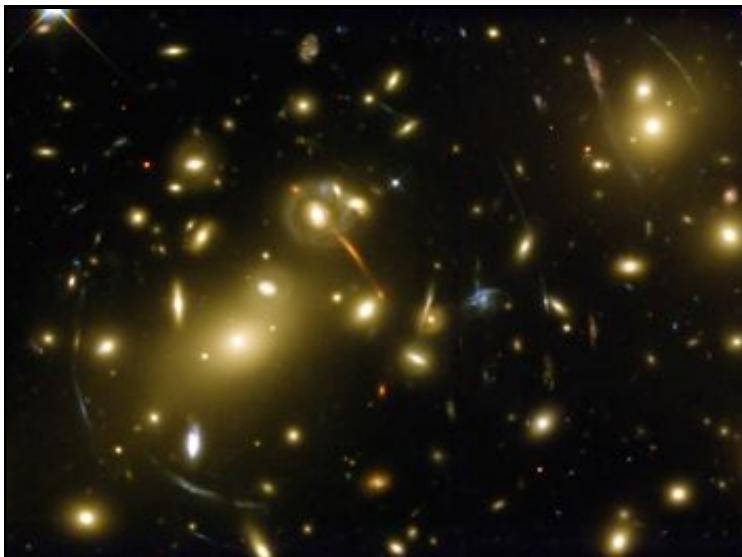

19

Dark Matter / Evidence / Gravitational Lensing

20

# Dark Matter – Why Is It Dark? Does It Matter?

## What Is the Evidence? #3

### Gravitational Lensing

The (distorted) images  $\Rightarrow$  the mass distribution in the 'lens'

We find this is more than we can see in the lens

It's as if there is some additional mass, that is not luminous, that is providing the extra gravity that is needed to bend the light and produce the distorted images.

"Dark Matter" again?

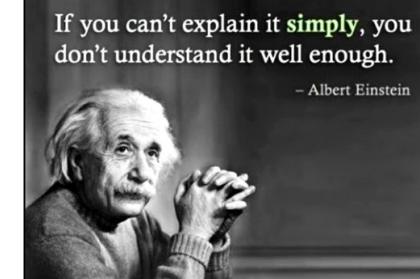

Dark Matter / Evidence / Gravitational Lensing

22

## What Is the Evidence? #4

If you can't explain it **simply**, you don't understand it well enough.

– Albert Einstein

Dark Matter / Evidence / Cosmic Microwave Background

24

# Dark Matter – Why Is It Dark? Does It Matter?

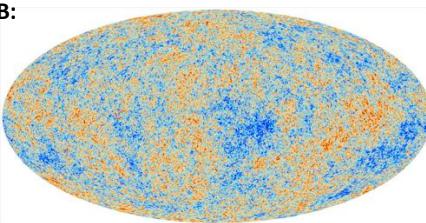

**What Is the Evidence? #4**

---

**Cosmic Microwave Background**

The fourth and final strand of evidence is not easy to explain

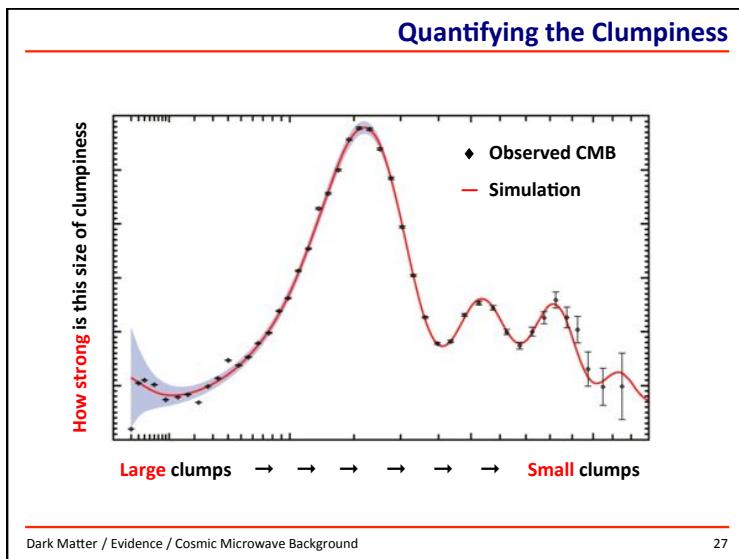

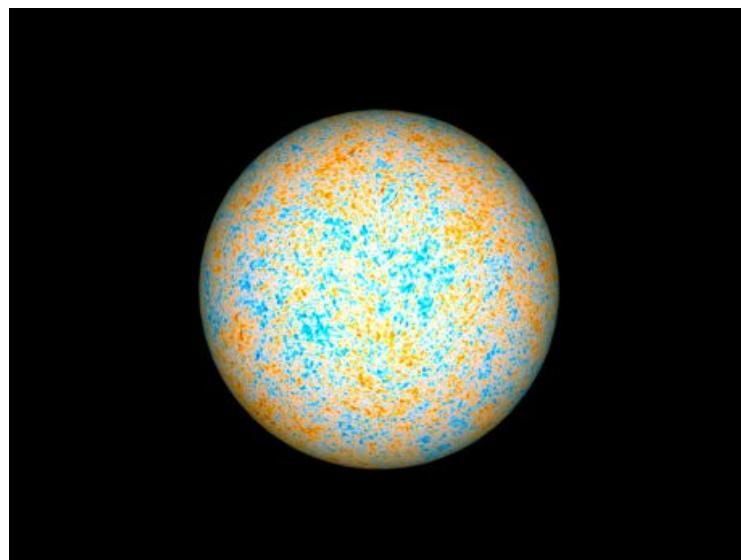

The CMB:

The degree of granularity – the "clumpiness" – depends on the relative amounts of ordinary matter and dark matter

---

Dark Matter / Evidence / Cosmic Microwave Background      25

**What Is It?**

---

OK, I'm convinced.

There's a lot of evidence that there is something dark out there. But... what *is* it?

There are two main candidates for the composition of DM...

**MACHOs**  
Massive Astrophysical Compact Halo Objects

**WIMPs**  
Weakly Interacting Massive Particles

---

Dark Matter / What Is It?      28

# Dark Matter – Why Is It Dark? Does It Matter?

## Galaxy Halo

Dark Matter / What Is It? / MACHOs / Halo

29

## MACHOs

### MACHOs

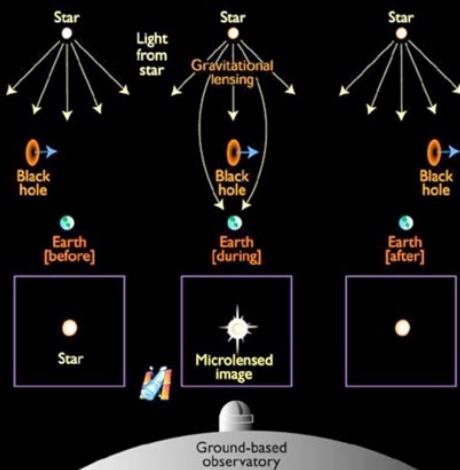

Massive Astrophysical Compact Halo Objects

Bodies composed of 'normal' matter that emits no light  
Black holes, neutron stars, white dwarf stars

How can they be detected? Gravitational microlensing

30

## Gravitational Microlensing by Black Hole

# Dark Matter – Why Is It Dark? Does It Matter?

## MACHOs

### MACHOs

Massive Astrophysical Compact Halo Objects

Bodies composed of 'normal' matter that emits no light  
Black holes, neutron stars, white dwarf stars

How can they be detected? Gravitational microlensing

At most, MACHOs account for a few % of Dark Matter

Dark Matter / What Is It? / MACHOs

33

## WIMPs

### WIMPs

Weakly Interacting Massive Particles

Interact through gravity, but not electromagnetism  
Similar to neutrinos, but much much heavier and slower

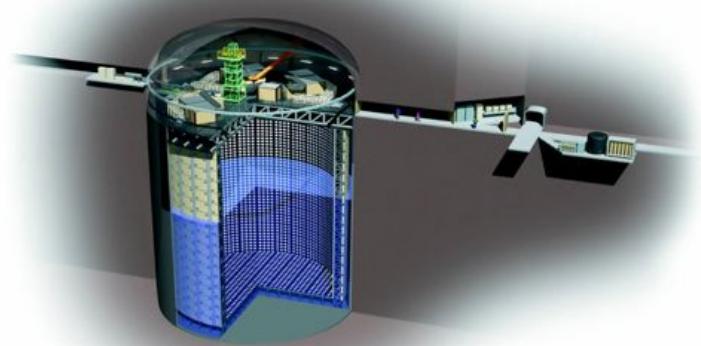

Born in the Big Bang (see "The Beginning of Everything")  
Annihilation of DM and anti-DM particles now very rare

WIMPs could be captured by the Sun  
... and annihilate with each other to make neutrinos

Dark Matter / What Is It? / WIMPs

34

## Super-Kamiokande

Dark Matter / What Is It? / WIMPs / Detection / Super-Kamiokande

35

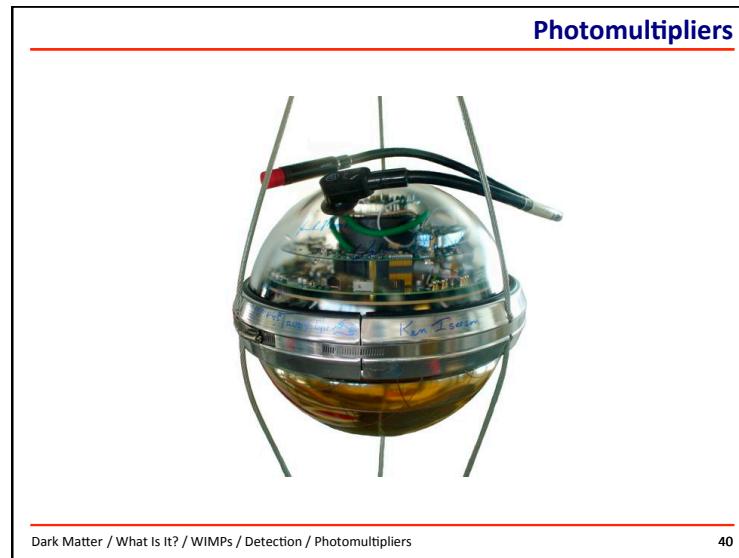

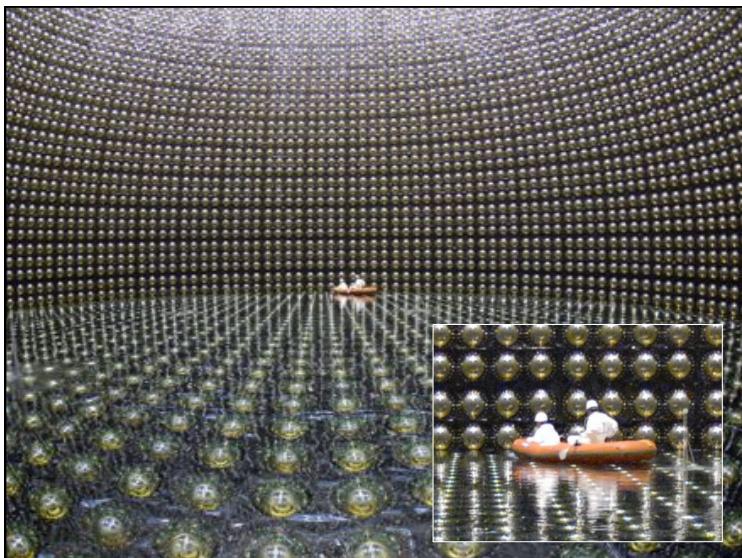

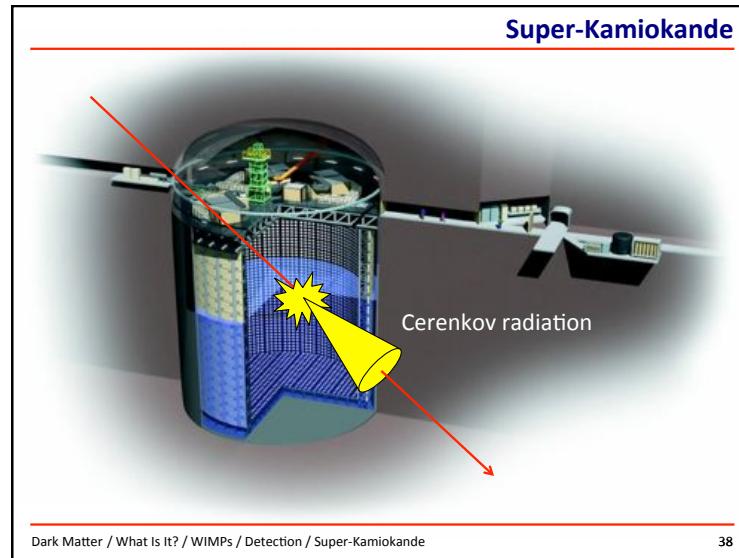

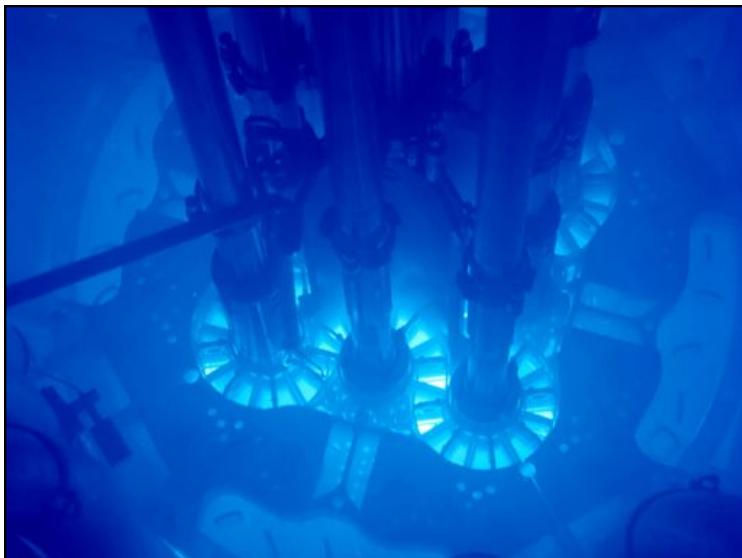

## Cerenkov Radiation

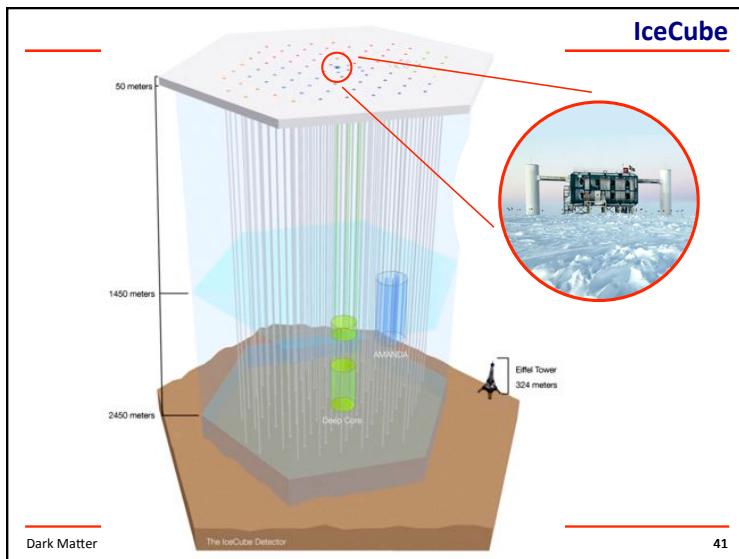

Dark Matter / What Is It? / WIMPs / Detection / Cerenkov

36

# Dark Matter – Why Is It Dark? Does It Matter?

# Dark Matter – Why Is It Dark? Does It Matter?

## Gamma Rays

**WIMPs**  
As well as being concentrated (locally) in the Sun ...  
there might be a lot of them at the centre of the Milky Way

DM annihilation would produce very energetic gamma rays

There are experiments planned to search for these

Dark Matter / What Is It? / WIMPs / Detection 42

## Cerenkov Telescope Array

A photograph of a landscape featuring several large, blue, hexagonal telescopes arranged in a grid pattern. The telescopes are set against a backdrop of a clear blue sky and distant, rocky hills or mountains.

Dark Matter / What Is It? / WIMPs / Detection / CTA 44

# Dark Matter – Why Is It Dark? Does It Matter?

## WIMP Detection

### CDMS – Cryogenic Dark Matter Search

GeSi crystals with a superconducting skin

Detect vibrations produced by atom being "kicked" by WIMP

### DRIFT – Directional Recoil Identification From Tracks

1000 litres of low pressure gas

An atom hit by a WIMP can recoil by mm, making a track

### PICASSO – Project in Canada to Search for Supersymmetric Objects

Freon bubble chamber with 200 $\mu\text{m}$  bubbles in gel matrix

WIMPs turn liquid bubble gas  $\Rightarrow$  acoustic shock wave

## WIMP Detection

There are many other attempts to detect DM directly...

CRESST in Gran Sasso, Italy

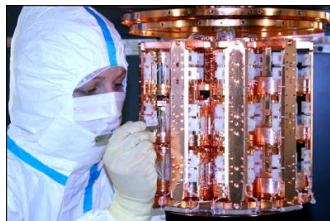

DAMA in Italy

DEAP at SNOLAB, Canada

EDELWEISS in France/Italy

SIMPLE in France

WARP at LNGS, Italy

Many of these experiments have observed "events" ...

... but many are contradictory or not yet confirmed

## Alternatives

There is another possibility ...

- We have misunderstood how gravity works
- Hence we only seem to need dark matter

Maybe gravity works differently on the scale of

- The Universe
- The Galaxy
- The Solar System and smaller

There is a theory called Modified Newtonian Dynamics (MOND)

However, it generates more problems of its own

# Dark Matter – Why Is It Dark? Does It Matter?

**Does It Matter?**

---

**What are the consequences?**

Simulations  $\Rightarrow$  galaxy distributions similar to observations  
Without dark matter, matter doesn't "clump" enough

---
