

The Great Moon Hoax

Why a hoax?

President Kennedy couldn't deliver on the promise

How many believe it?

6% of all Americans have doubts

At what stage in the Apollo programme did it start?

Man in Earth orbit - yes. Man on the Moon - no.

What is the "evidence"?

Scientific scrutiny makes a good science lesson ...and hopefully an interesting talk.

Great Moon Hoax / Introduction

Kennedy made a promise... Impressive... Important... Difficult... Expensive... Great Moon Hoax / Why / Kennedy

The Evidence

- Computing power just wasn't up to the task
- Radiation in space would kill the astronauts

• Video anomalies : filmed on Earth, just slowed down

flags wave in the breeze dust doesn't fall at the right rate hammer and feather experiment rocket exhaust not visible from LM

• Image anomalies : many anomalies are quoted...

Great Moon Hoax / Evidence

So Many Image Anomalies...

Concerning the Hasselblad cameras used...

- Astronauts couldn't operate the cameras with gloves
- Fiducial cross marks appear behind objects
- Images are perfectly framed even though no viewfinder

Great Moon Hoax / Evidence / Image Anomalies

13

So Many Image Anomalies...

- Shadow angles are inconsistent with illumination by Sun
- Shadow lengths are inconsistent with illumination by Sun
- Shadows are filled in by another light source
- No stars appear in the sky
- No blast crater underneath the Lunar Module engine
- Same background appears in images of different regions

... and dozens more

Great Moon Hoax / Evidence / Image Anomalies

Look at the Evidence

Let's look at the evidence, piece by piece, and see how much of it stands up to scientific scrutiny.

Computers

Radiation

Video clips

Still images

Computing Technology

1954: Scientists from the RAND Corporation illustrate how a "personal computer" might look in the year 2004...

"With teletype interface and Fortran language, the computer will be easy to use."

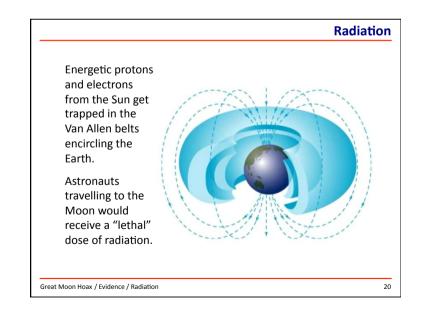

Great Moon Hoax / Evidence / Computing

17

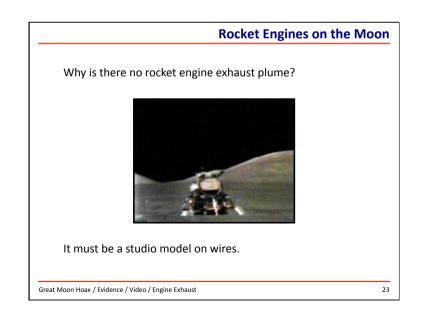

Computers Too Big

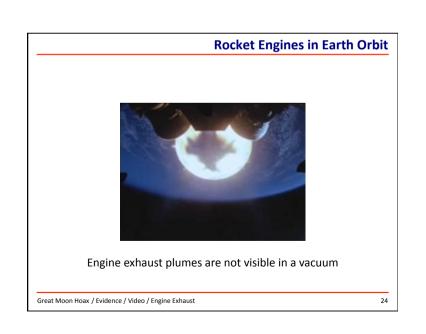

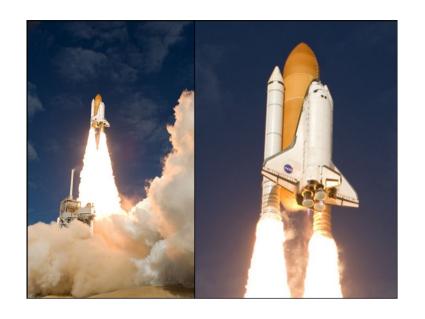

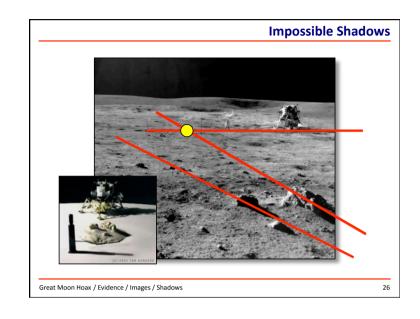

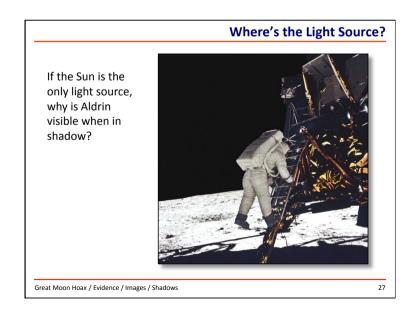

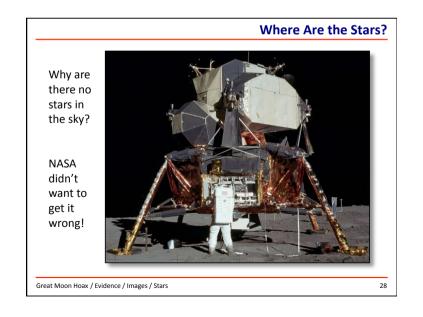

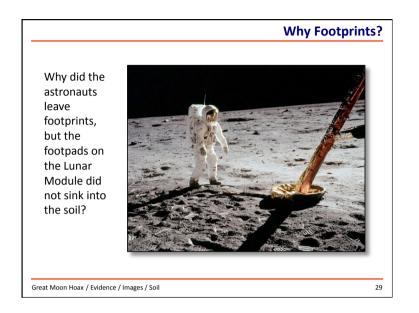

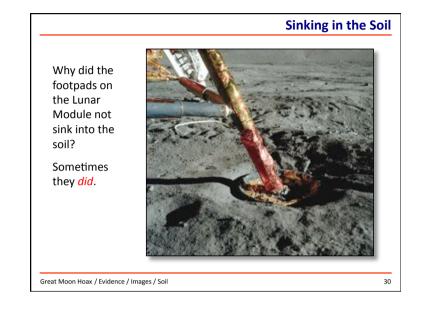

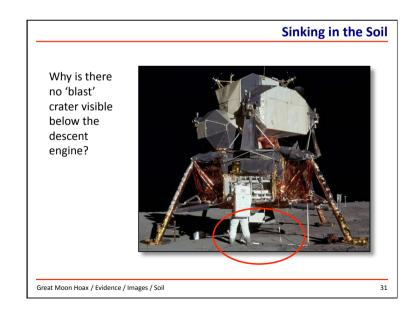

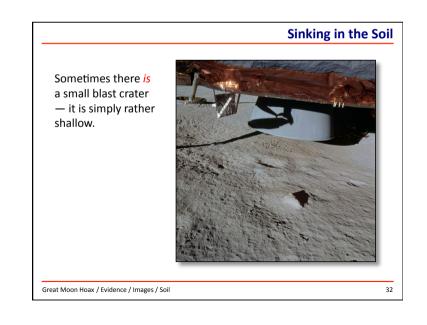

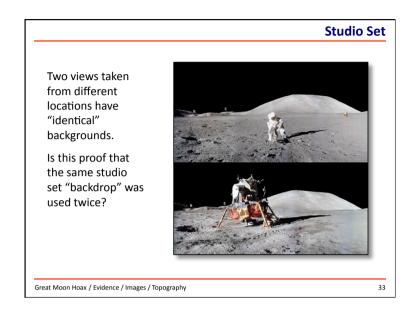

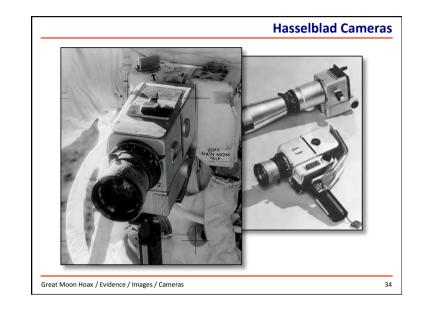

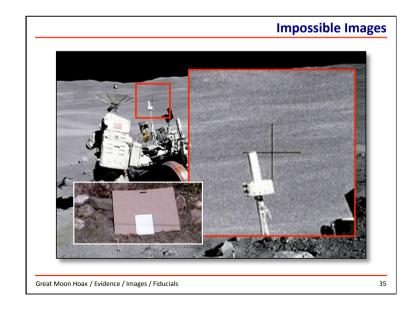

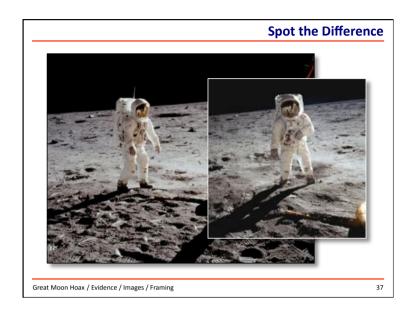

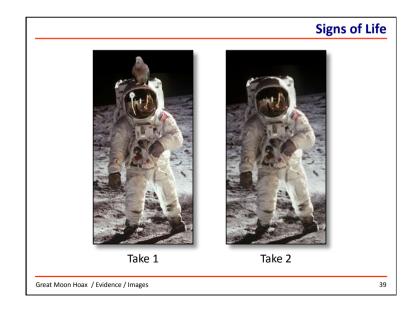

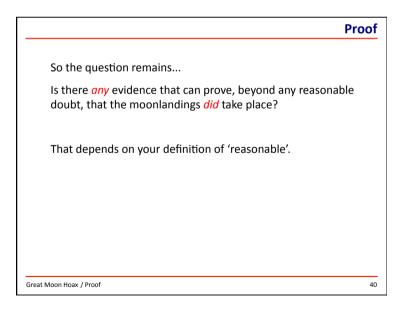

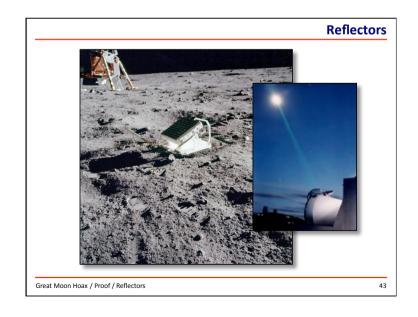

Can Hubble See Apollo?

Despite what some Moon Hoax advocates believe, we still have to obey the laws of physics.

Resolution of the HST $\sim \lambda / D \sim 0.2 \,\mu$ radians

~ 10 millionths of a degree

~ 0.05 arc seconds.

To see an object a few metres across at a distance of 400,000 km would need a resolution of

 $\sim 0.01 \,\mu \text{radians}$

~ 0.002 arc seconds.

The Lunar Module is too small by a factor of ~ 30.

Great Moon Hoax / Proof / Hubble

What's Wrong With This Image?

Great Moon Hoax / Evidence / Images / Problem

. .

What's the Point?

Why are there so many Moon Hoaxers?

Do they really believe their "scientific evidence"?

Most arguments can be countered with some basic physics... ...so analysis of the "evidence" makes a good science lesson.

Thinking about why things (might) behave differently on the Moon can help teach "Physics on Earth".
